E SERIES

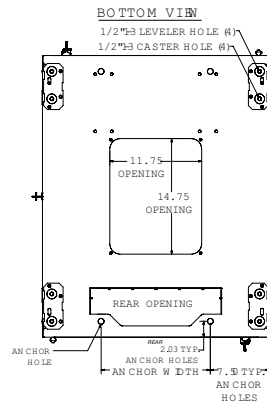

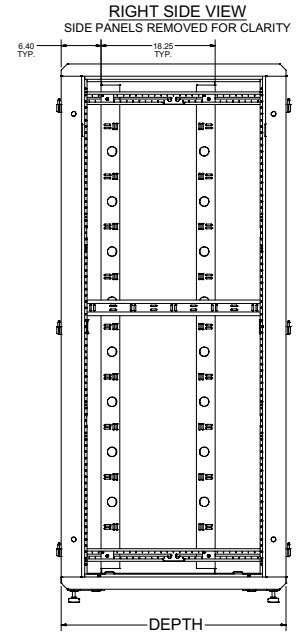

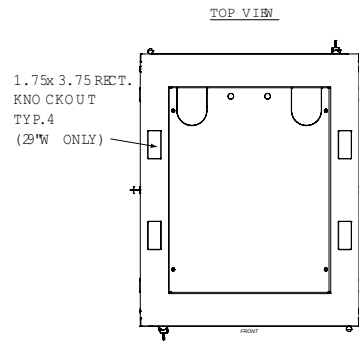

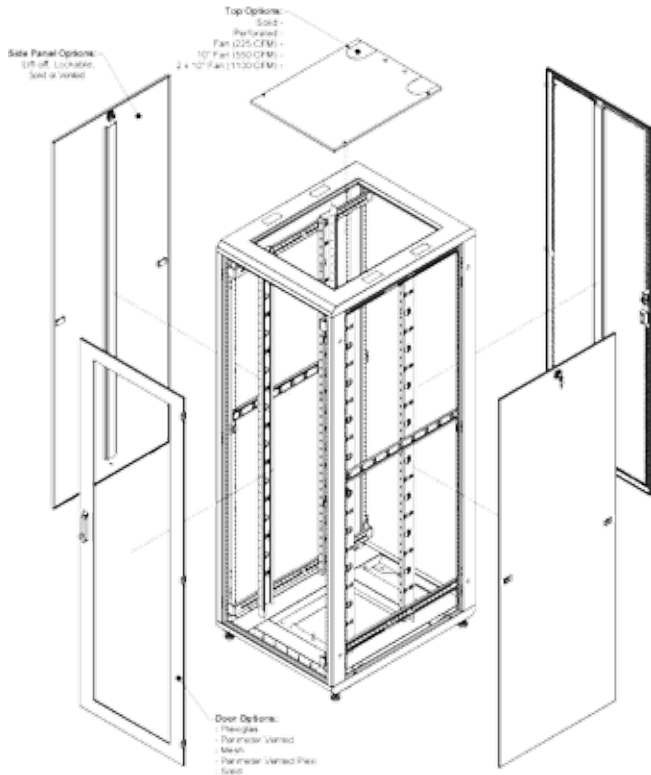

Great Lakes Case & Cabinet is pleased to announce that major improvements have been made to our E-Series enclosures. These improvements are due to customer requests and will make our enclosures more versatile.

IMPROVEMENTS INCLUDE:

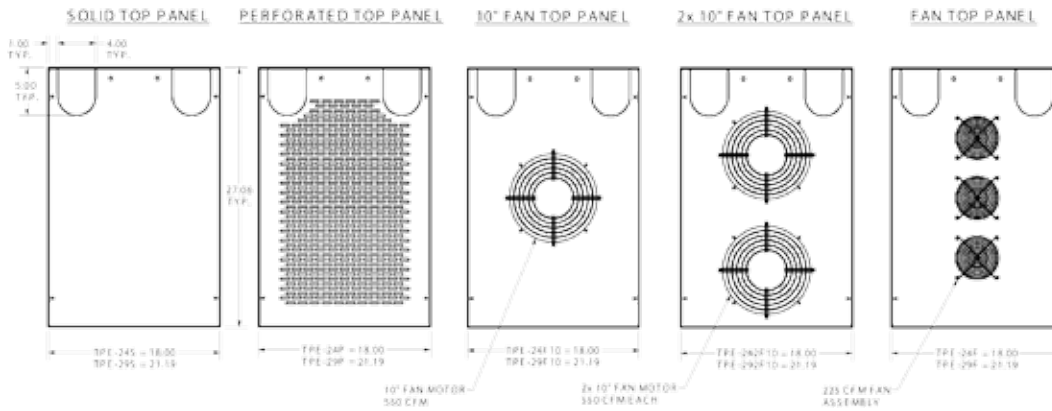

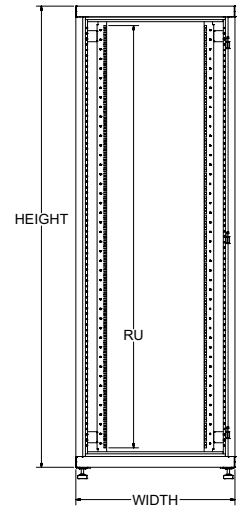

- New design that yields at least a 50% increase in weight capacity.
- Redesigned interior for easy 19" EIA rail installation and infinite adjustment.
- New stronger 12 gauge, powder coated "Universal Cage Nut Rail" standard. Cage nut options are M6 or #10-32. If you require tapped #10-32 rails, these will still be available. - Please specify at time of order.
- Rails also double as cable management with round cable pass through holes and vertical and horizontal tie down slots.
- Rails will have RMU markings and standard universal rail will be multi-vendor server compliant.
- TRC (True Rail Count) rails - This certifies that the number of RMU are true and all accessible within the door opening.
- Vertical & horizontal cable management lacing bars that move independently from the mounting rails will replace the CME series of cable management that attached to the mounting rail. This improved design removes any size restrictions caused by cable trays.
- Redesigned bottom that allows for Anti-tip leg option and rear cable entry.
- Networking/ganging of enclosures through the corner post, no tools required. This allows you to keep side panels installed when required.

These E-Series improvements along with our new accessories make your installation/maintenance and service even easier.
