## CM-47

As part of the development of Great Lakes' Enhanced Networking (EN) Enclosures, we developed our own, proprietary, repositionable finger sections made from a blend of engineering thermoplastics, designed to assist in effective cable management.

These cable management fingers are molded in 11 inch sections with 7 fingers, designed to align the finger openings with RMUs along the rail for easy cable pathways. Each section has six holes, allowing for easy mounting directly to the rail itself, either on the front, side or rear of each EN Series rail.

Each EN Series Enclosure rail comes with six, 7 RMU sections of cable management fingers, evenly spaced along the rail, 24 sections total. Unless otherwise specified when ordering, those fingers will be installed on the face of each rail.

These cable management finger sections can also be used on the E and ES Series Enclosure. When installed in an ES Series Enclosure, the finger sections are installed on the face of the rail, using Great Lakes proprietary flexible mounting profile (FMP), a series of holes outside the EIA pattern, designed for the mounting of brackets, brush grommet, cable management, patch panels and other equipment within the enclosure, without sacrificing any RMU mounting space between the rails themselves.

Individual sections are available as the CM-47. A kit of twelve sections is available as the ESC-K12. A kit of 24 sections of fingers is available as the ENC-24.

The CM-47 either as an individual section or as part of a Cable Management Rail Kit offers tremendous flexibility and a wide variety of options for managing your cable pathways in the EN or ES Series enclosure.
