

SERIOUS DATA SECURITY.
REAL SERIOUS.

DIGITAL KEY ACCESS CONTROL

Go keyless and cardless with Digital Key Access Control. Digital Key Access Control consists of a mobile app and proprietary hardware controller that integrates with electromechanical handles; digital keys are delivered directly to authenticated users and their smartphone to unlock critical infrastructure products from Great Lakes: cabinets, wall mounts, industrial/outdoor cabinets, and the security panel system.

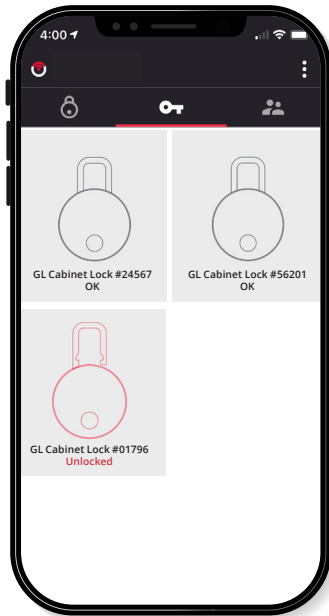

**Efficient and fast setup and maintenance.
No physical keys. No RFID cards.**

FEATURES

- **Enhanced Audit Trails-** Generate reports that detail the authorized and unauthorized access attempts
- **Administrator Role-** Invite and create users, issue keys and expiry dates, delete users and keys, and more
- **Authenticated Users-** Users receive digital keys on their smartphone; phones respond to key creation and cancellation in real time
- **Eliminate Physical Keys-** Digital keys use unique Bluetooth technology to unlock handles when user phone is at short-range proximity
- **Integrated to Systems-** Seamlessly integrates with existing monitoring and ticketing platforms
- **Unlimited Scalability-** Infinite creation of digital keys and authenticated users; no limit to the number of controlled cabinets, wall mounts, etc.
- **Off-network Technology-** Cloud management creates a cyber-resilient solution; eliminates physical and virtual servers, physical network connections, and IP addresses
- **Digital Security-** Unique and patented security architecture, TLS 1.3, ECC 192 bit

CONSOLIDATE AND MANAGE

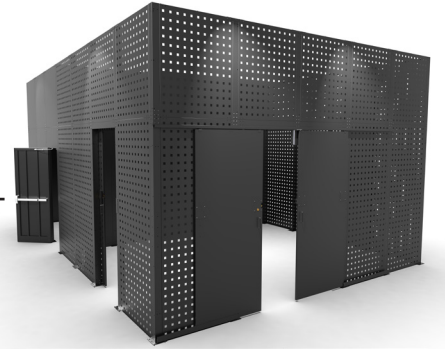

Smartphone or any Bluetooth-enabled device with the proprietary app

- Manage thousands of handles, regardless of physical location
- Send digital keys to authenticate users
- User phone responds to key creation and cancellation in real time
- Open handles when user phone is at short-range proximity

Note: Handles pictured are representative; cloud based control may be used with a variety of handles
